

Han-Modular® Push-In

Pushing Performance
Since 1945

The Push-In technology further expands the broad HARTING portfolio with an additional robust and reliable field termination technology.

With Push-In the assembly times can be reduced up to 30% and the flexibility in the field is raised significantly.

Our solutions differentiates itself by an efficient and easy Plug & Play assembly process, helps eliminate mistakes, for example by ensuring a correct build up due to the coding of our products. HARTING offers the biggest variety regarding the choice of termination technologies on the market and often a combination of those technologies leads to the best possible result. With the Push-In termination technology HARTING now offers an additional option for the perfect setup of your industrial connector.

Your benefits at a glance:

- **Up to 30% less assembly time** with direct insertion of the conductor into the contact chamber
- **Easy handling** due to tool-less termination
- **Cost savings** compared to alternative termination technologies
- **Maximal flexibility** - suitable for ferrules, stranded wires and solid conductors
- **Compatible** with identical products with other termination technologies

HARTING Han-Modular® Push-In

Quick and intuitive field termination technology

Han-Modular® Push-In System

Termination side of the Han-Modular® Push-In

The Push-In termination technology is an advance development of the cage-clamp technology. The quick and uncomplicated assembly ensures consistent quality and robustness for this new product range.

For processing the wide ranged area of cross sections, HARTING offers numerous products from the Han® portfolio to always provide a suitable solution for the varying requirements throughout the different applications.

The toolless assembly allows the connection of wires to the insert without any additional steps of preparation. This feature saves time, money and resources altogether.

The Push-In technology offers the possibility to assemble different types of wires. The options cover stranded wires to solid wires including wires equipped with ferrules (insulated/uninsulated).

Push-In is a further addition to the existing HARTING portfolio to support you with the different type of challenges in the field.

Han® Push-In tool 09 99 000 1002

The Han® Push-In tool can be used as a supporting element during the assembly process. When using stranded wires within Push-In the tool can block the actuator of the insert. The spring of the contact system is now completely opened and the stranded wire can be inserted safely.
